Boundless Ideas Meet Seamless Technology

It takes ideas for creation to materialise. Today, with the entire world looking towards India, we need ideas that are inherently boundless and technology that is truly seamless.

That is why, to ensure that such ideas come to life, we have created a truly advanced cement according to India's diverse conditions and its new age construction needs.

Presenting the all new JK Lakshmi PRO+ Cement with 7+ benefits. Because it's time to realise even the most distant of our dreams.

7+ BENEFITS

PLUS DURABILITY
Micro Particle Strength Technology leads to dense & higher impermeable concrete which ensures high durability in constructions

PLUS FINISH
Finer cement particles lead to better smoothness and superior finish

PLUS SPEED
Early de-shuttering saves time and ensures a speedy construction process

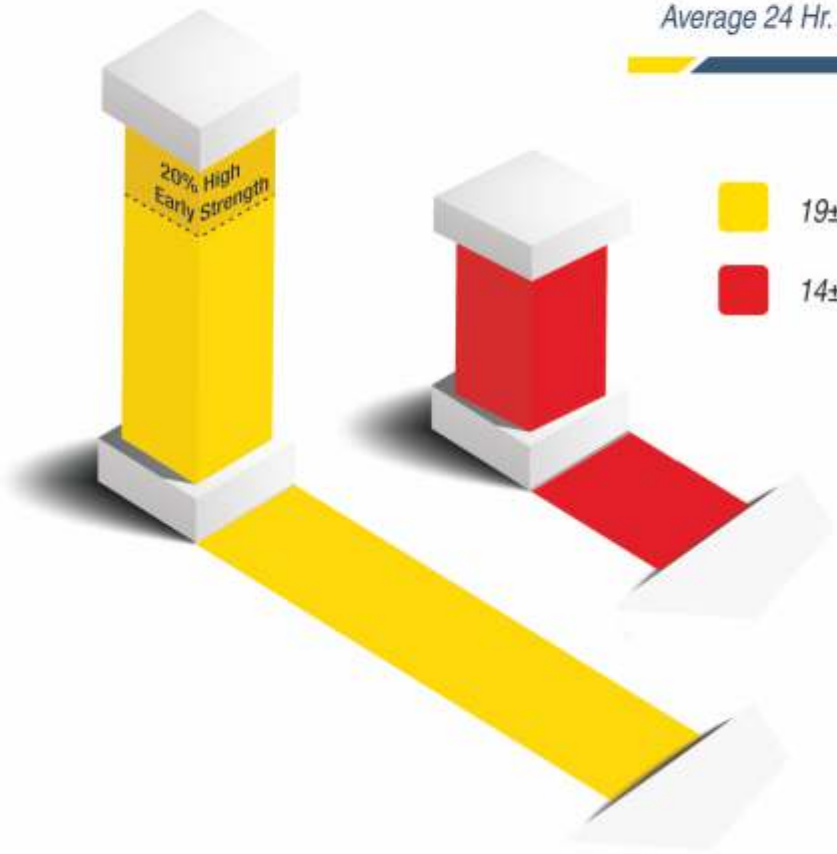
PLUS SURETY
High quality tamper proof and moisture resistant bags give correct quantity and factory-fresh quality of cement

PLUS SERVICE
Timely delivery and an expert technical team for on-site guidance

PLUS STRENGTH
With 20% higher early strength, JK Lakshmi PRO+ Cement offers plus Mazbooti

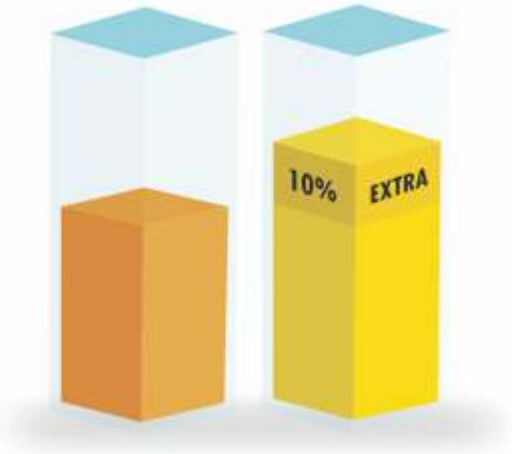
PLUS ECONOMY
With 5% more volume per bag of cement, it requires lesser number of bags for construction

Average 24 Hr. Strength (MPa) of PPC



19±1 JK Lakshmi PRO+ Cement (20% High Early Strength)

14±1 Ordinary Cement



Average Surface Area (m^2/Kg) of PPC

420±10 JK Lakshmi PRO+ Cement (10% Extra)

350±20 Ordinary Cement

Applicable Standards

JK Lakshmi PRO+ Cement conforms to IS 1489 (part 1):1991 with its latest amendments.

Basic Applications

JK Lakshmi PRO+ Cement is ideal for the following applications:

Masonry, Plaster Products For A Multitude of Construction Projects

House

Concrete - Residential To High Rise Buildings

Residential & Commercial Driveways

Bridges

Airport Structures

Water Retaining Structures And Treatment Facilities

Precast Industry

Water & Curing

Water used for mixing & curing should be clean & free from injurious amounts of oils, acids, alkalis, salts, sugar & organic materials or other substances that may be deleterious to concrete or steel. Potable water is generally considered satisfactory for mixing concrete.
Curing is a vital process for durability of concrete. Efficient water curing should be commenced as soon as the concrete starts hardening, i.e. no nail / thumb impression on freshly laid concrete. It should be continued for 7-10 days.
